

Resource group and storage account ke do alg alg folder bana ke
Kam se kam 10 baar practice karna hai..
Aur 10 aadmi ko screen share karke padana hai..

10 resource azure ka padne ke baad fir gemini cli/claude code se code likhna start karenge..
--

Agle 2 weeks plan
pehla 10 resource haath se banaenge 15 din me
Uske baad ke sab resource AI se banaenge 2-3 din me sb bana denge
Atul sir

resume+naukri.com+linkedin + 5 me fail.. uske baad rukna hai..
intro+usecase Sikhsha Sathi group me padana
Notes proper hona chahiye apn apna

Terraform me kya kya bacha hai	
Modules	Data Block
Local Block	Dynamic Block
Conditional+Dynamic Block	Terraform Functions
Output Block	Generic Modules
Provisioners/Custom_data	Terraform Workspaces
Taint	Lifecycle Block
Multisubscription Deployment	Optional Attributes
Use of Count Loop in Production	

Migration
On Prem to Cloud(Azure, AWS, GCP)
Why Azure/AWS/GCP?
One Cloud to Another Cloud
Azure to AWS, Azure to GCP
GCP to Azure, GCP to AWS
AWS to Azure, AWS to GCP
Migration of Infra to PAAS on same cloud(webapp, acs, aks(containerization), functions)
Virtualization to Containers (AKS, ACS)
Virtualization to Serverless
Virtualization to Web App
Virtualization to OpenShift

Junior ho ya senior, Code likhna tuccha kaam hai	Landing Zone is very very important + Gen AI
System design important hai	

	Ek landing zone set karne ke lie on prem ho ya cloud ho kya kya important element dekhte hai?	
	Hierarchy (Normal/ Hub and Spoke)	

Ye Sara Kaam Automation/ Practice/ Engineering Team	Governance and Compliance (Azure Policy(built in and Custom) and Initiatives)	Ye Sab Terms Ratt Dalo
	IAM (entraid-users/groups, RBAC, App Registrations)	
	Networking (Vnet, Subnet, Peering, etc..)	
	Compute Workload (VM, VMSS, App Services, ACS, AKS)	
	Advance networking->Loadbalancing (Loadbalancer, Application Gw, Frontdoor, Traffic Managers)	
	Database (SQL Servers, PostgreSQL, CosmosDB)	
	Storage - Azure Storage Accounts, Blob, File Share etc..	
	Security (AppGw with WAF, Firewall, NSG, ASG, Bastion, Keyvault, Private Endpoints, Sentinel, DDOS Protection)	
	Backup (VM Backup, Storage Backup, DB backup)	
	Disaster Recovery (RTO, RPO)	
	Monitoring (Azure Monitor, Log Analytics Workspaces, Application Insights)	
	High Availabiltiy (Availability Sets /Zones)	
	Cost Optimization	
	Documentation (HLD, LLD, Networking Diagram, Firewall, NSG, Operational Readiness, Runbook with all steps)	

Grouping ko bandh ke chlna hai....Agar nahi bandh paa rahe toh thoda sa effort dalke dosti banao mast..

Mast video call pr aise nach nach ke bulao sabko..

Greenfield = Ek dum taza taza.. new application

Brownfield -> Onprem pr already chl raha hai, usko utha ke cloud pr deploy karna hai..

Migration Phases
1. Discovery and assessment Phase
Application and Infra Both
1.1 Business Owners, Business Criticality
1.2 Downtime Tolerance
1.3 Developer Stack
1.4 Which Databases?
1.5 Traffic Pattern
2. Infrastructure Discovery
1.1 VMware, Hypervisor?
1.2 Address Space ?
1.3 Firewall, Domains, Certificate ?
1.4 Backup, DR, Monitoring ?

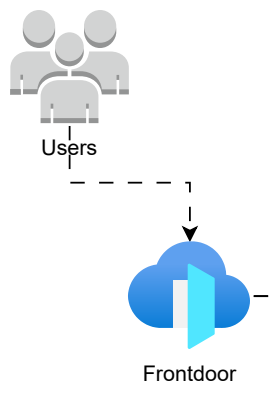

2 Migration Strategy
Lift and Shift
Rehost, Replatform
Refactor, Retire, Retain, R
3. Azure Landing Zone Design
HLD/LLD
4. Implementation Phase
4.1 Infra as a Code - Terraform
4.2 Push Code to SCM with Trunk Based Development
4.3 CI/CD Pipelines with DevOps

Keywords: Landing Zone, Governance, Identity and Access Management, networking, Network Connectivity, Compute, Loadbalancing, Security, Backup, DR, Terraform IAC, Database Migration, App Migration, Replication, Testing, Cutover Sheet, Production Deployment, Monitoring, Right Sizing, Cost Optimization, modernization

prod
main.tf, provider.tf, variables.tf

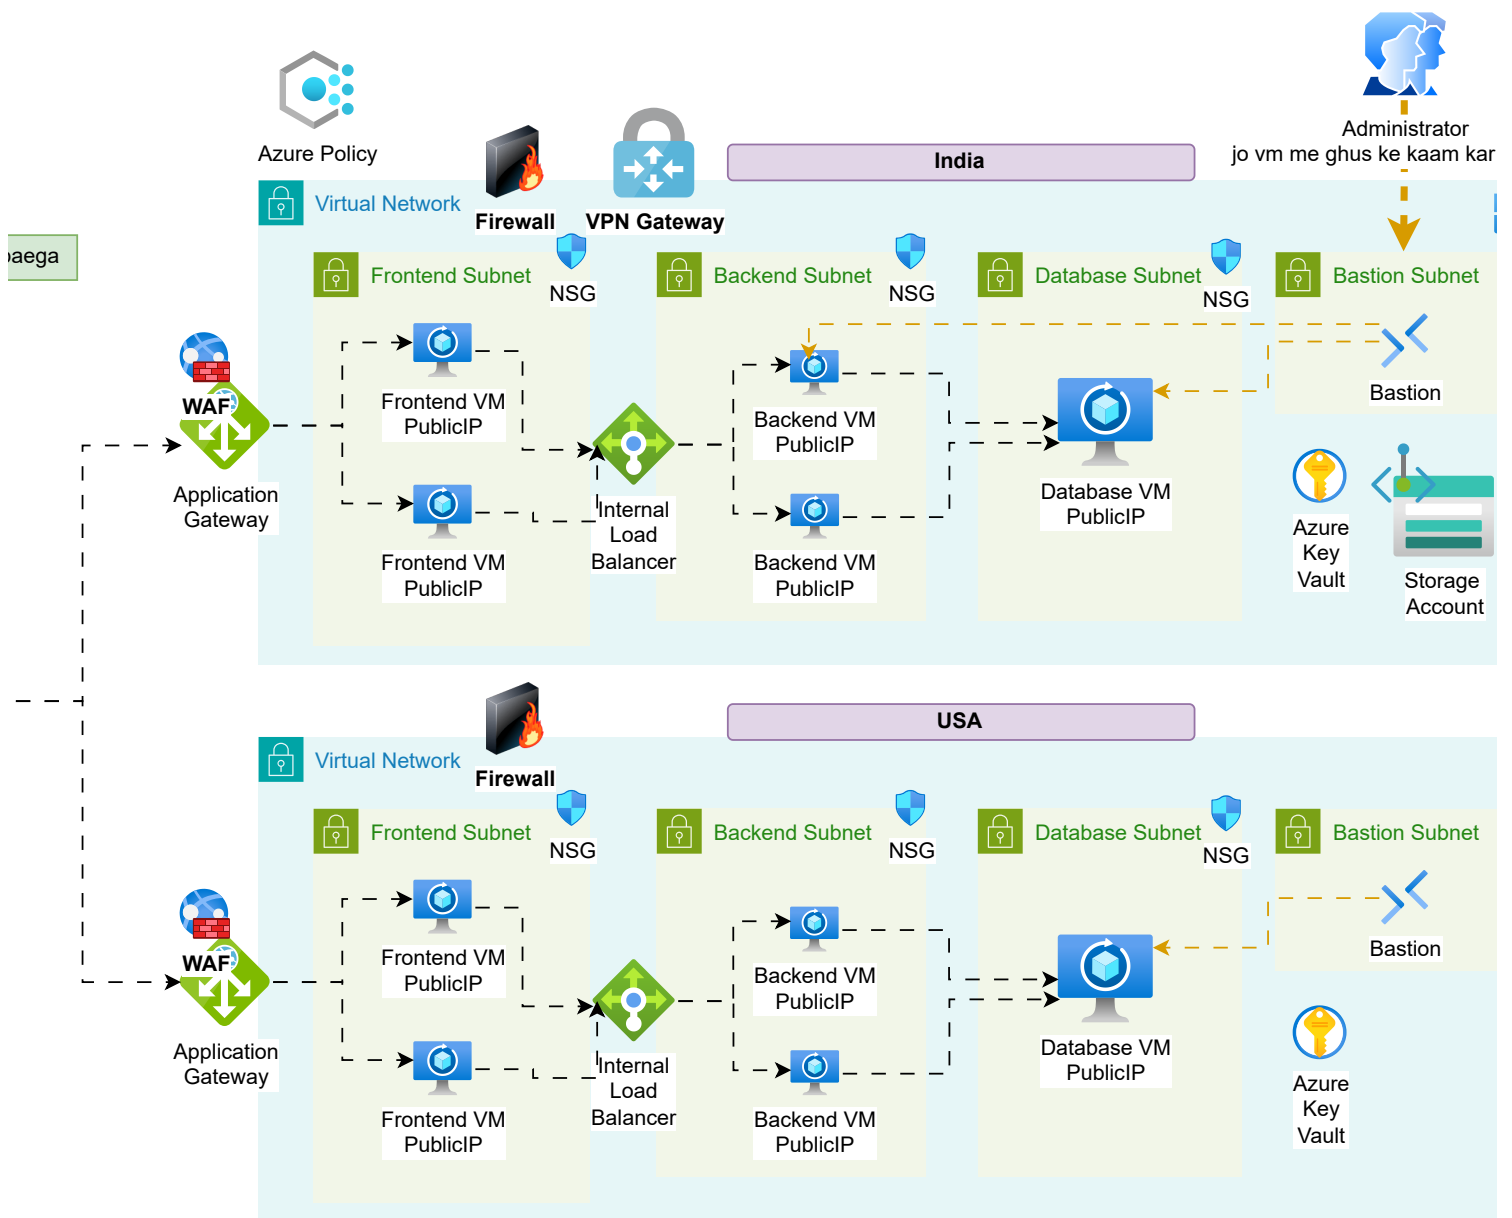

Website dekh p

1. Hierarchy Setup
Simple
Hub and Spoke
2. Governance and Compliance
Azure Policy
built-in and Custom policies and Initiatives
Identity and Access Management (IAM)
Entra ID Setup, Users, groups
AD Sync, On Prem AD Setup
RBAC, MFA, PIM Role
4. Networking Setup
Hub and Spoke Networking Model
Hub Vnets, Spoke Vnets, Vnet peering
VPN Gateway -> Site2Site, Express Route
Application Gateway, Frontdoor, LoadBalancers, Traffic Managers

5. Compute Workload
VM, VMSS, Web App, App Services, Azure Functions
ACS, AKS
6. Database and Storage Setup
PostgreSQL, SQL Server, MySQL
7. Security Architecture
Zero Trust
Application Gateway with WAF, Firewalls
NSG, ASG
Bastion, KeyVault, SSL
Sentinel, Defender
Private Endpoint, managed identity
7. Monitoring
Log Analytics Workspaces
Application Insights
Azure Monitor
Prometheus/Grafana

8. Backup
VM Backup
DB backup
Storage Account Backup
9. Disaster Recovery
Storage Account Backup
RTO/ RPO
Active/Active , Active/Passive
Failover Testing
10. Cost Optimization
Identify oversized and reduce
Shutdown schedule
Right Sizing
Storage Hot and Cool decisions
